

TRUSTED DURABILITY, SINCE 1947.

Southwest's RnR Piston is a renewable rubber piston in that the rubber on this non-bonded piston can be replaced by a new piston rubber once the old one has reached its usable life. The proprietary blend of rubber and fabric used in the rnR piston resists the pinching and extrusion that commonly occurs in the heel of the piston.

The use of synthetic fabric in the Southwest RnR piston virtually eliminates the loss of heel strength, caused by water absorption allowing the piston to achieve a higher level of performance compared to competing designs. The RnR piston is suitable for water and some synthetic-based drilling muds.

*Note: Replacement rubber kits will include the piston rubber, end plate and snap ring.

Key Features Include:

- Available for single and double-acting pump designs.
- Replacement rubber insert reduces operating expense.
- Proprietary blend of rubber and fabric reduces heel pinching and extrusion.
- Synthetic fabric yields a stronger, denser and stiffer heel for superior performance.
