

365 Millennium is a metal-free substitute for API modified high-pressure thread compound.

365 Millennium compound is formulated without metallic compounds (lead, zinc, copper) plus the TFE-fluorcarbon provides an added advantage. This gives an environmentally safe thread compound for casing, tubing, and line pipe. It performs excellent in severe conditions and resists corrosive gases like hydrogen sulfide and carbon dioxide. It protects threads against galling and allows easy makeup and break-out.

- TFE FLUORCARBON
- RESISTS CORROSIVE GASES
- METAL FREE
- PROTECTS AGAINST GALLING FOR EASY MAKEUP AND BREAK OUT

Typical Characteristics	
NLGI grade	1
ASTM Penetration Unworked @77°F (25°C)	310-340
Base Grease	Lithium 12
ASTM dropping point	450°F (254°C)
Sulfur Content, %	<0.3 %
Flashpoint	450°F (232°C)
Color	Black
Texture	Grainy
Brushable to	>0°F (-18°C)
Temperature Range	0 - 475°F (-18°C to 246°C)

DO NOT USE ON OXYGEN LINES
